

## Severe weather operations at MemphisWeather.net

Thank you for placing your trust in MemphisWeather.net (MWN) during inclement weather conditions. MWN staffing is very limited. During lengthy or high-coverage severe weather events, MWN may choose to limit its volume of social media correspondence to focus on the most severe storms and/or the most populated areas in order to provide the most relevant and timely information to the greatest number of people. Personal requests for information and non-relevant conversations will be limited to allow the dissemination of vital information to all followers.

MWN's live coverage of weather events (nowcasting) is in **no way guaranteed**, nor should it be expected. It is incumbent upon users of MWN's information to also utilize other sources, such as the MemphisWeather.net website and blog, commercial TV or radio outlets, and NOAA Weather Radio, to obtain the latest information, watches, and warnings.

Due to the possibility of electrical grid failure, loss of internet connections, and infinite other reasons, **never base important decisions on weather information obtained from the internet**. Though steps have been taken to reduce the possibility of service loss due to external factors, no guarantee is made to the availability of any service offered by MWN.

MemphisWeather.net faithfully serves residents of Shelby, Fayette, and Tipton Counties in west Tennessee; DeSoto, Marshall, and Tunica Counties in northwest Mississippi; and Crittenden County in east Arkansas. Coverage will be limited to these areas during severe weather in the metro area.

Thank you for allowing us to serve you!

A handwritten signature in black ink, appearing to read 'Eut Allen', is positioned above the text identifying the owner.
